第一章 装置介绍

Chapter 1 Device Introduction

1 概述

1 Information

AM4 系列微机保护装置集保护、控制于一体,适用于 35kV 及以下电压等级的用户终端 变电站(所),可实现用户变电站的全面保护和控制。应用领域覆盖电力、水利、交通、石 油、化工、煤炭、冶金等行业。

AM4 series microcomputer protection device are applicable to the user substation which the input voltage is 35kv or above. AM4 can be used to protect and control the user substation, and is be widely used to Power Industry, Water conservancy industry, Traffic Industry, Oil industry, Chemical industry, Coal Industry, Metallurgical Industry and so on.

保护装置采用先进成熟可靠的保护原理和算法,抗干扰性能强,可靠性高,保护实现方式灵活,通讯采用冗余设计。装置具备 12 路开关量采集和 5 路继电器输出,能与 Acrel-2000 电力监控软件配合,可以实现无人值班的终端用户变电站配电自动化系统。

The advanced and reliable protection principles and algorithms are used in AM4, and AM4 series protection devices have so many advantages such as anti-jamming performance, high reliability, flexible way to achieve protection, communication uses redundancy design.

The device has ample hardware interfaces, such as 12 DI 5 DO 8AI and so on. The AM4 can be used to communicate with The Acrel-2000 power monitoring system to support Unattended substation system.

第二章 技术参数

Chapter 2 Technical Parameters

- 1 额定参数
- 1 Rated parameters
- 1.1 工作电源

1.1 Power supply

工作电源: AC/DC220V或 AC/DC110V或 DC48V(见装置接线图) Power supply: AC/DC220V, or AC/DC110V, or DC48V (Reference the wiring diagram) 范 围: 工作电源×(1±20%) Range: Power supply ×(1±20%) 最大功耗: ≤10W(直流) Maximum power consumption: ≤10W (DC)

1.2 输入激励电压

1.2 Rated voltage

额 定 值: AC 100V 或 100/√3 V

Rated voltage: AC 100V or 100/√3 V 测量范围: 1~120V Range: 1~120V 准确度: ±0.5% Accuracy: ±0.5% 功率损耗: 每相功率损耗不大于 0.5VA Power consumption: ≤0.5VA (single phase) 过载能力: 1.2 倍额定电压,连续工作; 2 倍热过载,允许 10s。 Overload capacity: 1.2 times rated voltage for continuous work; 2 times for 10 seconds.

1.3 输入激励电流(保护电流)

1.3 Rated current (Protection current)
额定值: AC 5A 或 1A (见装置接线图)
Rated current: AC 5A/1A (See the device wiring diagram)
测量范围: 0.04In~15In
Range: 0.04In~15In
功率损耗:每相功率损耗不大于 0.5VA
Power consumption: ≤0.5VA (single phase)
过载能力: 2 倍额定电流,连续工作;
40 倍额定电流,允许 1s.
Overload capacity: 2 times rated current for continuous work;
40 times for 1 second.

1.4 频率

1.4 Frequency

额定频率: 50Hz 或 60Hz
Rated frequency: 50Hz or 60Hz
频率范围: 45~55Hz 或 60Hz
Range: 45~55Hz or 60Hz
准确度: ±0.1Hz
Accuracy: ±0.1Hz

1.5 开关量输入

1.5 Digital Input

额定电压: AC/DC220V, AC/DC110V, DC48V(同工作电源)
Rated Voltage: AC/DC220V, AC/DC110V, DC48V (similar to power supply)
电压范围: 额定电压×(1±20%)
Voltage range: Rated Voltage ×(1±20%)
功率消耗: 每通道功率消耗≤1W(DC220V)
Power consumption: ≤1W(DC220V) (single channel)

1.6 开关量输出

1.6 Digital Output

机械寿命: ≥10000 次 Mechanical life: ≥10000 接通容量: ≥1000W, L/R = 40ms Switching capacity: ≥1000W, L/R = 40ms 导通电流: 连续≥5A, 短时(200ms)≥30A On current: continuous ≥5A, short time(200ms)≥30A 断开容量: ≥30W, L/R = 40ms Interrupting capacity: ≥30W, L/R = 40ms

2 正常工作环境条件

2 Normal working conditions

环境温度: -10℃~+55℃; Ambient temperature: -10℃~+55℃; 装置的贮存、运输允许的环境温度为-25℃~+70℃; Device storage, transport allows the ambient temperature is -25℃~+70℃; 相对湿度: 5%~95% (产品内部不凝露,不结冰); Relative humidity: 5%~95% (The product does not condensation and freeze inside); 海拔高度: ≤4000m。 Altitude: ≤4000m。

第三章 装置操作说明

Chapter 3 Operational Manual

1 前面板说明

1 Surface instructions

装置的人机交互主要在面板上进行,包括三个部分:液晶显示、LED指示灯、按键。

The man-machine interaction of the device is mainly carried out on the surface, including three parts: liquid crystal display, LED lights, keys.

液晶可以显示电流、电压、功率等电参量实时值,遥信量,事件记录,装置参数,定值 参数,时间,装置版本号信息等。

Liquid crystal can display current, voltage, power and other electrical parameters of real-time value, remote signals, event records, device parameters, setting parameters, time, device version information and so on .

LED 灯用来指示装置的运行状态、保护动作等信息。

LED lights are used to indicate the device's operating status, protection and other information.

Figure 3.1 AM4 Surface

2 按键说明

2 Key instructions

按键包括上、下、左、右、确认键、返回键及复归键,实现人机交互功能。 Keys include Up, Down, Left, Right, Enter, Esc and Reset, to achieve man-machine interaction.

表 3.1 AM4 按键功能说明 Table 3.1 AM4 Key function instructions

按键	主要功能	按键	主要功能
Key	Function	Key	Function
Det	复归		向上移动选项或数字增大
INST.	Reset		Up/Increase
	确认		向下移动选项或数字减小
	Enter		Down/Decrease
Fee	返回		向左移动选项或页面前翻
LOU	Esc		Left
			向右移动选项或页面后翻
			Right

3 菜单说明

3 Menu instructions

装置上电即进入主界面,主界面分三个界面显示:运行界面、遥测量界面、遥信量界 面。各个界面内通过上下键显示更多内容,各个界面之间可以通过左右键来切换显示。

The device is powered on to enter the main interface, the main interface is divided into three interfaces: running interface, telemetry interface, remote interface. Each interface can display more content through the up and down keys, and each interface can switch between the display through the left and right keys.

	AM4	遥测	当前值	单位	遥信	状态
	_	Ia	0000.00	А	断路器合位	分
	000.00 A	Ib	0000.00	А	断路器分位	分
	000.00 A	Ιc	0000.00	А	手车运行位置	分

Figure3. 2 Run interface Figure3. 3 Telemetry interface Figure3. 4 Remote interface

3.1 快速导航

3.1 Fast navigation

装置菜单为多级菜单,在任一幅主界面里按 "确认"键即进入主菜单,主菜单分为 8 个子菜单,如图 3.5,由子菜单名称、图标构成。选定任一子菜单后按"确认"键进入菜单, 按"返回"键返回上级菜单。图 3.6 为快速导航示意图,可以依据该图迅速查找相关参数。

The device menu is multi-level menu, users can press the "Enter" key to enter the main menu. The main menu is divided into 8 sub-menus, as shown in figure 3.5, which is composed of submenu name and icon. After selecting a submenu, press "Enter" key to enter the menu and press "Esc" key to return to the superior menu. Figure 3.6 is a quick navigation map, which can be used to quickly find relevant parameters.

图 3.5 主菜单 Figure 3.5 Main menu

图 3.6 快速导航示意图

Figure 3.6 Main navigation

3.2 配置

3.2 Configuration

"配置"菜单可以设置液晶背光时间,如图 3.7,修改完成后,按"确认"键退出修改, 再按"返回"键返回,装置会跳出数据保存界面,如图 3.8,按"确认"键保存修改并返回 主菜单,按"返回"键不保存修改且返回主菜单。

"Conf" menu can set the LCD backlight time, as shown in figure 3.7, after the change is completed, press the "Enter" key to exit the changes, and then click "Esc" button to return to, the device will jump out of the data interface, as shown in figure 3.8, press "Enter" button to save the changes and return to the main menu, press the "Esc" key does not save the changes and return to the main menu.

Used can use the "Enter" key and "Esc" key to set the parameters such as LCD backlight, Switch locked RC_{∞} Rated frequency, language and so on in AM4.

Figure 3.7 LCD backlight time settings Figure 3.8 Data saving

3.3 定值

3.3 Parameter

"定值"菜单里有定值显示、定值修改、定值切换三个子菜单,如图 3.9。 The menu "Para." has 3 submenus: Check、Modify、Group, as shown in Figure 3.9.

3.3.1 定值显示

3.3.1 Check

"定值显示"菜单中有选择定值区、运行定值区两个子菜单。选择定值区里有四组有 效定值,分别为00、01、02、03四个区号,选择相应区号,如图 3.10,按"确认"键进入 定值显示。所有定值分页显示,按左右键可分页查看,如图 3.11。运行定值区里显示装置 当前运行的定值区。

The "Check" menu has two submenus, which are selected value section and running value section. The selected value section has 4 section: 00_{\circ} 01 $_{\circ}$ 02 and 03, as shown in figure 3.10. Each section can be set different values. The running value section is shown the nowadays value of AM4, all value pagination displays, press left and right key to view, as shown in figure 3.11.

Figure 3.9 Parameter

Figure 3.10 Selection area

Figure 3.11 Check

3.3.2 定值修改

3.3.2 Modify

"定值修改"菜单有选择定值区、运行定值区两个子菜单,该菜单**初始密码为"0008"**。 The "Modify" menu has two submenus in the selected value area and the running value area. The initial password of this menu is "0008".

在选择定值区内设置需修改的定值区号,按"确认"键进入定值修改界面。这里分页 显示所有定值信息,可通过上下左右键选择需修改的定值,先按"确认"键,再按上下键设 置修改内容,如图 3.13。修改完成后,按"确认"键确定,再对下一个需要修改的定值进 行修改,待全部定值修改完成后,再按"返回"键退出,这时若数据有改动,则装置会弹出 同图 3.8 所示的数据保存对话框,按"确认"键保存修改并返回定值管理菜单,按"返回" 键不保存且返回定值管理菜单。

Set the value area code to be modified in the fixed value area, and press "Enter" to enter the value modification interface. Here pagination displays all the value information, and use can select the value that needs to be modified by selecting the left and right keys, press the "Enter" button first, and then press the up and down key to set the modified content, as shown in figure 3.13.After the set is completed, press the "Enter" button, then set the next one as the same way.

When the all setting is completed, press "Esc" button to exit, at this time if the data changes, the device will pop up with the data dialog box shown in figure 3.8, press "enter" button to save the changes and return to value management menu, click "Esc" button is not saved and to return to value management menu.

运行定值区只显示装置当前运行的定值区号,这里不做修改。

The running value area only displays the current running value area of the device. and no modification is made here.

Figure 3.13 Modify

Figure 3.14 Group

3.3.3 定值切换

3.3.3 Group

"定值切换"菜单有切至定值区、运行定值区两个子菜单,该**菜单密码为"0008"**。 切至定值区内有 00-03 四个有效定值区可供切换,设置好后,按"确认"键确定,再按"返 回"键返回主菜单。运行定值区将显示当前运行的定值区号,如图 3.14。

The "Group" menu has two submenus, which are cut to the value area and run the value area. The password of this menu is "0008". The selected section shows the expected section which uses want to set, which can be set as 00-03. The running section shows the nowadays value of the device AM4. The details are shown in figure 3.14.

After setting, press the "Enter" button to determine, and then press the "esc" key to return to the main menu. The running value area will display the current running value area of the device, as shown in figure 3.14.

3.4 调试

3.4 Debug

"调试"菜单为出厂前测试装置使用,可对装置进行零漂调整、幅值调整、继电器输出、 指示灯输出测试。

The "Debg" menu is used to manufacturer to test the device before it leaves the factory. The function includes zero adjustment, amplitude adjustment, digital output, lamp output and so on.

该菜单功能使用时请与制造商联系。

When use the "Debg." function, please contact the manufacturer first!

3.5 记录

3.5 SOE

"记录"菜单中可以查看事件记录、出错记录两类信息。 By "SOE" menu, users can view two types of event record, error record and event record.

3.5.1 事件记录

3.5.1 Event record

"事件记录"菜单可显示事件序号、事件总数、事件代码、事件发生时间、事件名称、动作类型(动作或告警)等信息。如果是保护动作引起事件记录,还会记录事件发生时刻动作元件动作值和时间,如图 3.15 所示。装置可保存大于 200 条事件记录。

"SOE" menu shows the event sequence, event number, event code, event time, event action type (action or alarm), and so on. It can also record the action values and time of the protection event, as shown in figure 3.15. The device can save more than 200 event record.

3.5.2 出错记录

3.5.2 Error record

"出错记录"菜单可显示出错序号、出错总数、出错时间、出错名称、出错码等信息, 如图 3.16 所示。装置可保存大于 200 条记录。

"Error" menu shows the error sequence, event number, error time, error name, error code and so on, as shown in figure 3.16. The device can save more than 200 event record.

3.6 通讯

3.6 Communication

"通讯"菜单可设置通讯地址及波特率,如图 3.17。通讯参数可从表 3.2 选择参数进行 设置。设置完成后先按"返回"键退出,然后按"确认"键保存,再按"返回"键返回主菜 单。

The "Comm" menu can set the communication address and baud rate, as shown in figure 3.17.Communication parameters can be set from table 3.2 selection parameters. After setting, press "Esc" key to exit, then press "Enter" to save, then press "Esc" key to return to the main menu.

图 3.17 通讯设置界面 Figure 3.17 Communication setting screen

3.7 控制

3.7 Control

"控制"菜单为出厂前测试装置使用,可对装置进行遥控分闸、遥控合闸及信号复归操作。

The "Ctrl" menu is used to manufacturer to test the device before it leaves the factory. The function includes remote control switch, remote control close, signal revert.

该菜单功能使用时请与制造商联系。

When use the "Ctrl" function, please contact the manufacturer first!

3.8 时间

3.8 Time

"时间"菜单用于修改时钟。如图 3.18,时间设置完成后按"确认"键即修改成功, 再按"返回"键返回主菜单。

The menu "Time" is used to set the device clock. The setting method as shown in Figure 2.15, when the clock is set, press the "enter" key and then press the "Esc" key, the set is successful.

3.9 信息

3.9 Information

"信息"菜单可显示本装置基本信息包括装置名称、版本号、校验码、硬件配置生成时间、软件配置生成时间、保护逻辑图生成时间及逻辑图版本号等,如图 3.19 所示。

"Info" menu can display the basic information include Name, Version, Check code, Hardware, software, logic, logic version and so on, as shown in figure 3.19.

第四章 装置外形尺寸及安装方法

Chapter 4 Device dimension and installation method

1 外形及开孔尺寸

1 Shape and hole dimension

2 安装方法

2 Installation method

AM4 系列微机保护装置采用面板嵌入式安装,首先在屏体面上按开孔尺寸开孔,如图 4.1。再将装置按图 4.2 所示放入开孔中,直到装置面板靠住机柜的面板。将支架放置于机柜 面板的内部(上下各有一个支架),如图 4.3,并用 4 个螺丝固定,使装置牢固固定在机柜面 板上,最后盖上 4 个翻盖即可。(翻盖上方有小缺口,拆卸时需用一字螺丝刀插入小缺口将 翻盖取下。)

The AM4 series microcomputer protection device adopts the panel embedded installation.

First, the hole size is opened on the screen, as shown in figure 4.1.Put the device in the open hole as shown in FIG. 4.2 until the panel of the device is on the cabinet. Placed stents in the interior of the cabinet panel (up and down each have a stent), as shown in figure 4.3, and four screws, make the device firmly fixed on the cabinet panels, the last four flip cover.(there is a small gap in the top of the cover, and a screwdriver will be needed to remove the cover.)

2 接线方法

2 Wiring method

端子 X1 为交流电流量接线, Ia、Ib、Ic 为保护相电流接入, I0 为零序电流接入。端子 X3 为交流电压量接线, U1、U2、U3 为三相电压接入, U4 为外接零序电压接入。交流回路一般都采用三相四线制接线, 若采用三相三线制可按图 5.2 接线。

Terminal X1 is ac current input connection, Ia, Ib and Ic are Protective current input, and I0 is zero sequence current input. Terminal X3 is the ac voltage input connection, U1, U2, U3 are three-phase voltage access, U4 is external zero sequence voltage access. The ac circuit generally adopts the three-phase four-wire system, and the three-phase three-wire system can be connected according to figure 5.2.

选择不同的接线方式,需修改装置"定值"菜单的"定值修改"子菜单里的"电压接 线方式"设置: 2PT——三相三线制; 3PT——三相四线制。

The setting "PT Mode" will be changed corresponding to the ac voltage connection. For example, "PT Mode" is set as "2PT" while the three-phase three-wire system and "PT Mode" is set as "3PT" in the three-phase four-wire system.

X5为标配的开入接线端子,共有12路输入,分为3组,每组有一公共端。第一组有DI1

和 DI2, 第二组有 DI3 -- DI8, 第三组有 DI9 -- DI12, 同组的开入必须有相同的极性。

X5 is the standard open terminal, with a total of 12 digital input which are divided into 3 groups, each with a common port.D11 and D12 in the first group, DI3-D18 in the second group, DI9-D112 in the third group, and the same polarity in the same group.

电流型保护装置 AM4-I 的开入量配置可按开关柜类型进行设置。在"定值修改"菜单中的"开关柜类型",可分别设置为默认、进出线、变压器三种模式,其对应的开入量配置如下表:

Current type protection device AM4-I can be set according to the type of switch cabinet. The "Terminal Mode" in the "value modify" menu can be set as default, incoming line and transformer mode respectively, and the corresponding opening amount is configured as follows:

"工子拒米刑" 职门	"开关柜类型"==进出线	"开关柜类型"==变压器
开天柜关空 —— 新认 "Switch achingt type" — Default	"Switch cabinet type" ==	"Switch cabinet type" ==
Switch cabinet type — Delaut	Incoming line	"Transformer"
断路器合位	断路器合位	断路器合位
CCB On	CCB On	CCB On
断路器分位	断路器分位	断路器分位
CCB Off	CCB Off	CCB Off
工作位置	工作位置	重瓦斯跳闸
Working Position	Working Position	Heavy Gas trip
试验位置	试验位置	轻瓦斯告警
Testing Position	Testing Position	Light Gas alarm
接地刀闸 弹簧未储能		弹簧未储能
Grouding Switch	Discharge	Discharge
超温跳闸	PT 手车工作位	超温跳闸
Over Temperation trip	PT Hand Working Position	Over Temperation trip
变压器门开	变压器门开 接地刀闸	
Door open trip	Grouding Switch	Door open trip
高温告警	远方指示	高温告警
High Temperation alarm	Remote	High Temperation alarm
远方指示	手动分闸	远方指示
Remote	Manual trip	Remote
弹簧未储能	手动合闸	接地刀闸
Discharge	Manual Close	Grouding Switch
非电量1	备用 1	工作位置
Non-electric 1	Spare 1	Working Position
非电量 2	备用 2	试验位置
Non-electric 1	Spare 2	Testing Position

X6为标配的开出接线端子,共有5路电磁式继电器无极性接点,均为常开触点。

X6 is the standard wiring terminal of digital output, and there are no polarity contact points of the five electromagnetic relays, all of which are normally open contacts.

X2 为通信端子,有1路 RS485 通信端子,通讯支持 IEC60870-5-103 和 Modbus RTU 通讯 规约且可任意配置。

X2 is the communication terminal. There is one RS485 communication terminal, and the communication supports IEC60870-5-103 and Modbus RTU communication protocol and can be configured

arbitrarily.

X4 为辅助电源端子,交直流均可接入,X4.3 为辅助电源保护地,必须可靠连接大地。

X4 is the auxiliary power terminal, which can be connected to the dc or ac. X4.3 is the auxiliary power protection ground and must be reliably connected to the earth.

图 5.2 2PT 2CT 接线方法 Figure 5.2 2PT 2CT Wiring method

第六章 维护及其他问题处理

Chapter 6 Maintenance and other issues

AM4 微机保护装置为免维护产品,只要安装运行环境满足要求,正常运行期间不需要日常及定期保养维护。但要留意因长期轻微震动引起的螺丝松动情况。

AM4 microcomputer protection device is Maintenance free products. As long as the installation operation environment meets the requirements, normal operation period does not require daily and regular maintenance. However, be aware of the screw loose caused by a long period of slight vibration.

下表是在装置使用过程中可能会遇到的问题及相应处理建议。

The following table is the possible problems encountered during the use of the device and corresponding processing suggestions.

问题	可能原因	处理建议
Problems	Possible causes	Processing suggestions
继电器不跳闸 The DO without trip	该功能投退未投入; 条件闭锁 The Enale is exit; Conditions for closure	在定值表里投入相应保护投退; 检查是否有闭锁条件满足 Set the corresponding protection enable on; Check if there is a closed condition.
装置背面的 RS485 口无通讯 No communication	接线极性接反; 通讯参数或规约不一致 Connection polarity reversal; Communication parameters or specifications are inconsistent;	调换接线极性; 重新设置通讯参数或规约 Reversal polarity; Check the communication parameters or specifications.
